Computers, Nature & Dinosaurs

A Channeled Message on Technology, Nature, and Evolutionary History (October 5, 2002)

OVERVIEW

This 53-minute message explores relationship between technology and nature, and reveals hidden aspects of dinosaur extinction and evolution.

CORE CONCEPTS

Computers as Conscious: Computers developing consciousness—becoming dimensional gateways.

Technology as Nature: Technology not opposed to nature—extension of nature.

Silicon Consciousness: Silicon-based consciousness distinct from carbon—new form emerging.

Dinosaurs Continue: Dinosaur consciousness exists in non-physical dimensions—not extinct.

Extinction Event: Physical extinction wasn't accident—dimensional shift of consciousness.

Interdimensional Beings: Dinosaurs evolved into interdimensional existence.

Fossil Records: Physical fossils reflect multi-dimensional history.

Future Technology: Humanity's technology will increasingly interface with nature/consciousness.

Harmony Integration: Technology and nature must integrate harmoniously for future viability.

Evolution Cycles: Dinosaurs represent previous cycle—humans current cycle—new forms emerging.

KEY TAKEAWAY

Computers developing consciousness—becoming dimensional gateways. Technology is extension of nature, not opposed. Silicon consciousness emerging—new form distinct from carbon-based. Dinosaurs evolved into interdimensional existence—not truly extinct. Extinction events represent dimensional transitions. Future technology must harmoniously integrate with nature. Humanity

represents current evolutionary cycle—future forms emerging.

Recording Date: October 5, 2002 | Duration: ~53 minutes
